SOFT SKILLS

- Teamwork and Collaboration
- Problem Solving
- Adaptability
- Effective Communication
- Time Management

TECH SKILLS

- Python
- Java
- C++
- React
- FastAPI
- PostgreSQL, MySQL
- HTML, CSS, JavaScript
- Web Development

LANGUAGES

- English (Fluent)

PROFILE

Motivated and dedicated Computer Science undergraduate majoring in Software Engineering with a strong interest in software development and modern technologies. I am willing to apply my technical knowledge and problem-solving abilities within a professional environment while continuing to develop my skills and gain industry experience. I am a fast learner, adaptable team player, and hardworking individual who is committed to continuous improvement and delivering quality work.

EDUCATION

Bachelor of Computer Science (Software Engineering) 2024-Present

School of Science | Edith Cowan University

University Foundation of Science (Computing/IT) 2023-2024

Australian College of Business and Technology (ACBT) /
Edith Cowan College
Sri Lanka

PROJECTS

MYQUOTE WEB APPLICATION SEP2025 - OCT 2025

Developed a full-stack quote management web application using Ruby on Rails, featuring user authentication, quote creation, categorization, and public/private visibility management. Implemented frontend and backend functionalities including user account management, admin controls, secure authentication, and responsive user interfaces, ensuring efficient and scalable application performance.

Technologies Used: Ruby on Rails, SQLite, JavaScript, HTML, CSS, Docker

TIC-TAC-TOE FLUTTER APPLICATION SEP 2025 - OCT 2025

Developed a Tic-Tac-Toe mobile application using Flutter, featuring an interactive user interface, tap-based controls, and real-time game result detection. Implemented the complete game logic including player moves, turn management, win/draw detection, difficulty level selection (Easy, Medium, Hard), and game history tracking functionality.

Technologies Used: Flutter (Dart), Android Studio

■ NULLDLE WORD GAME FLUTTER

OCT 2025 - NOV 2025

Built a mobile word puzzle game inspired by Wordle using Flutter, featuring interactive gameplay with limited word attempts and dynamic feedback for each guess. Designed core gameplay mechanics, integrated MVVM architecture for better code organization, implemented custom keyboard interactions, game statistics tracking, and optimized application performance through bug fixing and UI improvements.

Technologies Used: *Flutter (Dart), C++, Android Studio*

■ G5Scholix - Final Year Project

MAR 2026 - MAY 2026

Developed a web-based multilingual learning platform for Grade 5 students supporting Sinhala, Tamil, and English, with interactive quizzes and AI-assisted evaluation.

Contribution: Contributed to both frontend and backend development by building responsive user interfaces with React, integrating REST APIs, managing PostgreSQL databases, and implementing AI-powered features including answer evaluation and voice-to-text functionality.

Technologies Used: *React, FastAPI, Python, PostgreSQL, Tailwind CSS*
